

State of Roofing Supplements 2026

SuppX Supplement Index

Published April 26, 2026 | <https://getsuppx.com/resources/state-of-roofing-supplements-2026>

The SuppX Supplement Index is a proprietary internal methodology for scoring roofing supplement queue control, evidence completeness, revision drag, and follow-up discipline.

2026 internal-estimate operating signals:

- \$2,000-\$5,000 per claim: commonly missed supplement opportunity range used for planning.
- 14-day clean-file benchmark: internal operating target, not a carrier approval guarantee.
- 48-hour storm posture: intake alignment, queue triage, and owner reporting within two business days.
- \$80,000-\$120,000 per year: internal estimate for specialist salary, tooling, and management load.
- 200+ claims per month per client: internal throughput design target when handoffs stay consistent.

Methodology lanes:

1. Queue Control: open-file age, submit lag, and named next action.
2. Evidence Completeness: photo order, scope-delta clarity, code notes, and Xactimate support.
3. Revision Drag: repeated carrier questions, documentation gaps, and avoidable resubmissions.
4. Follow-Up Discipline: day-2/day-5 touchpoints, communication history, and leadership visibility.

Limitations:

This report is not a public market census, actuarial model, or promise of carrier approval. Carrier decisions depend on policy language, claim facts, and documentation quality.
